Improving schools for all: 5 ideas

Be clear about your commitment

- Put it on your website
- Celebrate National School Inclusion Week
- Create a billboard

Statement of Philosophy INCLUSION

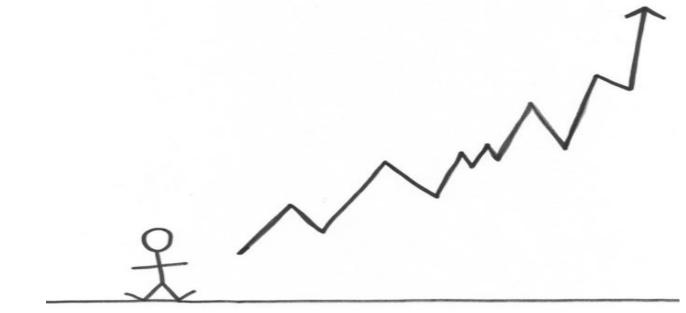

The North Reading School District is an inclusive school district. As such, we are a collaborative culture that welcomes all members into our learning community. With the recognition that students share more similarities than differences, our learning community respects each individual's unique contributions. In our schools, we expect all adults to share the responsibility to provide every student with access to and participation in high quality general education.

See inclusion as a process

- Think: Over, under, around or through?
- Find a way—or make a way!
- Focus on the spirit, not on the space.

Too often, students with disabilities, especially those with more moderate and significant disabilities, are excluded from the rich and complex experience of the science lab. This is unfortunate as many a teacher would argue that if students are not engaged in hands-on science, then they are not really "doing" science. In other words, science is about learning ideas and concepts, studying vocabulary, and understanding theories, but it is also about observation, exploration, and discovery.

Another reason to give all students access to lab work is to pique their interest and enhance their learning. It is widely accepted that students who participate in labs and other hands-on science activities will remember the material better and be able to transfer the learning across situations and lessons. Students who have learning difficulties or differences are often more on task during hands-on activities because there are typically a wide variety of ways to participate and the active and social nature of the science lab keeps students engaged. Finally, lab work helps all students hone social and communication skills, making it ideal for learners with disabilities who may need help with asking and answering questions, taking turns in a conversation, or knowing how to enter a discussion.

Having shared all of these benefits, many learners will need adaptations or modifications in order to be successful in a lab situation. Twenty ideas that can help you support diverse learners in your science classroom are offered here:

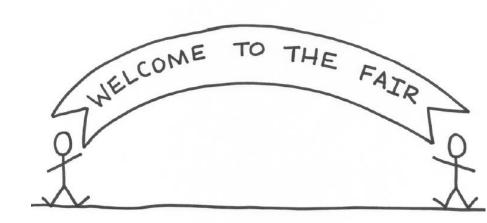

- 1. Be explicit about what you want students to know and do in each lesson and model what you want to see (e.g., language, behaviors, techniques) in the lab.
- Post expected lab behavior on a poster or chart that is clear for all to see- (emphasizing safety guidelines). Draw students' attention to this information every time they work in the lab.
- 3. Organize your lab around "big questions" that all students can answer in some way. For instance, the question, "What is a

In 30 Days to the Co-Taught Classroom, authors Paula Kluth and Julie Causton will teach you all you need to know about collaboration in 30 days.

Yes, you read that right in just 30 days, they will introduce you to the information, competencies and habits you will need to become a great co-teaching partner. The authors will help you get to know your co-teacher, understand each of your roles, improve your planning and co-planning skills, expand the structures you use to teach and support students and even celebrate your accomplishments.

Included in this remarkable book are:

- Tips, Ideas & Suggestions
- · Chapter Reviews & "To Do" Items
- Worksheets to Help You Plan
- Templates to Copy & Use
